

MARS Speed Dial

MARS Speed Dial application Self-provision/Configure speed dial for Cisco IP Phones

As on date user can configure the required speed dial (SD) numbers on his cisco IP Phone using a web based interface.

Parsec's MARS Speed Dial application for Cisco IP Phones allows user to configure his speed dial numbers using an application service configured in his Cisco IP Phone.

On click of the phone application service the list of line buttons will be displayed (Line buttons which has been configured to support SD in CUCM).

If a number has been already configured as Speed Dial the number/name will be displayed against that line button number.

To add/edit a SD user will scroll and select that line and on next screen he will key in the SD number and name. On submit the SD number will be configured on the selected line number.
